

SPH 302

THERMODYNAMICS

Nyongesa F.W., PhD.
e-mail: fnyongesa@uonbi.ac.ke

Lecture Hrs: **Mon 2 – 4 pm**
Thur 12 – 1pm

Course Objectives

- Explain the Laws of thermodynamics & their significance
- Apply laws of thermodynamics to solve problems relating to energy conversion processes

Course Outline

- Lecture 1:** Thermodynamic concepts & Zeroth Law
- Lecture 2:** 1ST Law of Thermodynamics
- Lecture 3:** 2ND Law
- Lecture 4:** Entropy & 2ND Law, 3rd Law
- Lecture 5:** Thermodynamic Potentials & Maxwell's Equations
- Lecture 6:** Phase Changes & Equilibria

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

3

Prerequisites

- SPH 203
- Calculus & ODE

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

4

INTRODUCTION

Before industrial revolution, “**machinery**” were powered by animals

James watt Steam Engine

- 1ST Engine (invented 1790) to convert steam (Heat) to mechanical work
- Lead to industrial revolution

The diagram illustrates the parallel motion linkage, a key component of Watt's steam engine. It shows a vertical rod connected to a horizontal beam, which is pivoted at its ends to two vertical guides. This arrangement converts the vertical motion of the steam cylinder into a nearly horizontal motion for the pump rod. The portrait shows James Watt in his workshop, surrounded by various mechanical parts and tools.

Steam Engines of Industrial Revolution

Steam powered cars

Steam powered bicycles

- By 19th cent, a new science was born – **THERMODYNAMICS**
- **GOAL:** Study & improve efficiency of devices that convert **heat** ↔ **work** i.e., **heat engines**

1930s - 1ST Diesel Engines (internal combustion) developed

2000 - Hybrids & gas turbines

What is Thermodynamics?

- **Thermo** \Rightarrow Energy transfer in form of heat
- **Dynamics** \Rightarrow Motion in form of mechanical work
- **Thermodynamics** = science that govern energy conversions processes (heat \rightarrow work and vice versa)

 UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
 Nyongesa F. W., Ph.D

16

Why Thermodynamics ?

- It provides the Laws of nature that govern energy conversion processes

```

graph LR
    Solar([Solar]) --> ENERGY((ENERGY))
    Chemical([Chemical]) --> ENERGY
    Thermal([Thermal]) --> ENERGY
    ENERGY --> Mechanical([Mechanical])
  
```

Relationship?

Energy 1

Laws of Thermodynamics

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302
Nyongesa F. W., Ph.D. 17

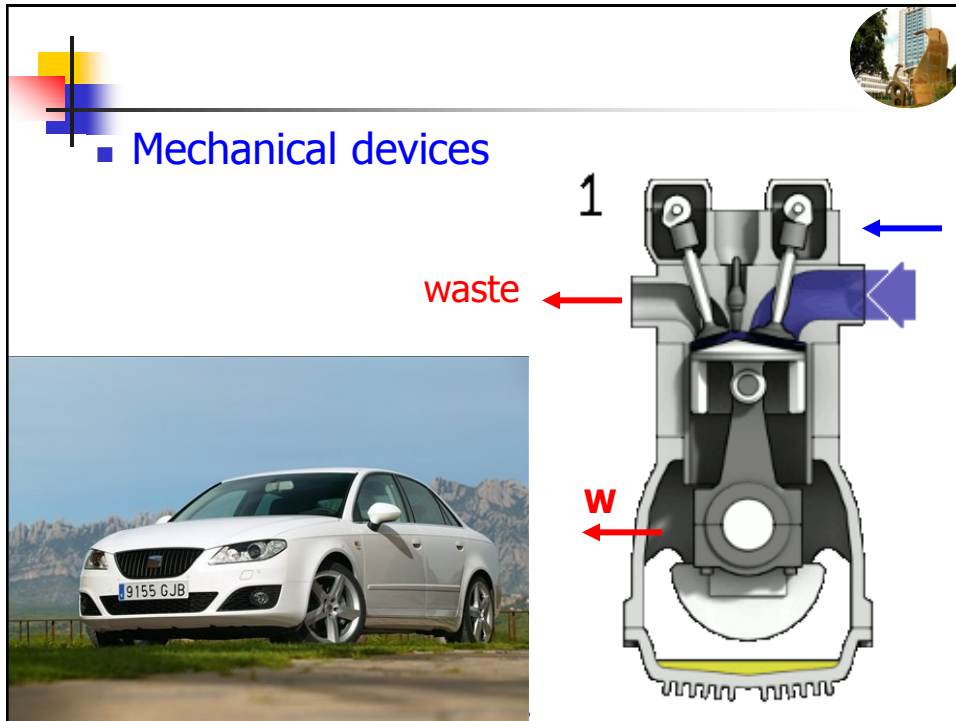

Examples – Digestive system

Food (Energy) input

Work out

Waste

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302
Nyongesa F. W., Ph.D. 18

Laws of Thermodynamics

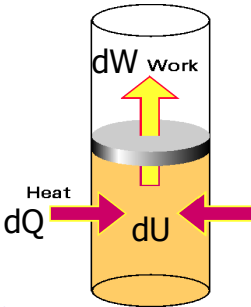

- Energy conversions processes are governed by **4 Laws (of Nature)**
- Zeroth Law**
Gives condition for heat exchange between bodies in contact

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302
Nyongesa F. W., Ph.D.

1ST Law

- Gives relationship between Heat input (dQ) into system, gain in internal energy (dU) and work output (dW)

$$dQ = dU + dW$$

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302
Nyongesa F. W., Ph.D.

- "No animal works continuously without eating or wearing out"

2/15/2021 10:47 AM

Second Law:

(i) Defines efficiency of processes that convert **heat** \leftrightarrow **work**.

- No heat engine or animal has 100% efficiency.

■ \Rightarrow **"If you eat, you must shit".**

2/15/2021 10:47 AM

(ii) Gives direction of natural occurring processes - **"Arrow of time"**

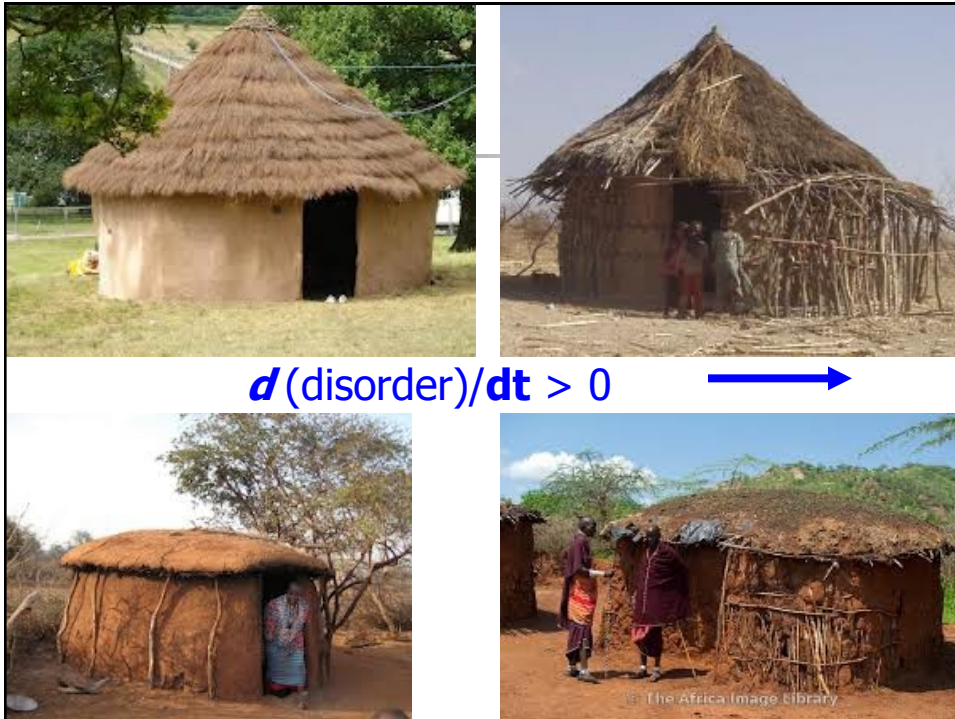

Nature is irreversible & Systems become Disorderly with time

2/15/2021 10:47 AM

26

Third Law:

- Explains behaviour of systems as $T \rightarrow$ absolute zero (0K).
 - NB Systems become orderly as $T \rightarrow 0$. E.g, water \rightarrow ice, where ice is more orderly (hence less dense) compared to water.

Ice crystal

Lecture 1

Thermodynamic Concepts & Zeroth Law

- ✓ Ideal Gas Laws
- ✓ Zeroth Law

Objectives

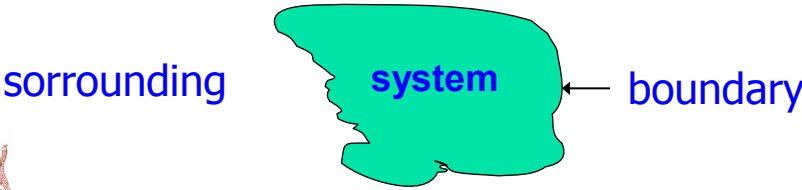

- Explain ideal gas Laws
- Explain Zeroth Law and its significance

Thermodynamic concepts

- Energy conversion processes are studied using a **thermodynamic system**
- System** – Part of material universe that can be isolated completely from the rest for investigation

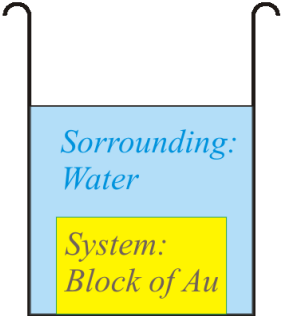

SYSTEM + SURROUNDING = UNIVERSE

surrounding system boundary

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302
Nyongesa F. W., Ph.D. 31

- Surrounding** - The rest of the universe in the neighbourhood of the system.
- To a thermodynamic system two 'things' may be added/removed:
 - **energy** (in the form of heat &/or work)
 - **matter**

Surrounding:
Water

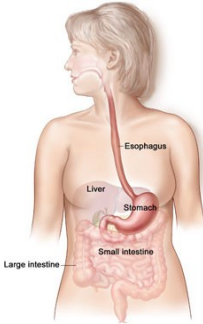

System:
Block of Au

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM 32

Types of systems

- 3 types

(a) Open systems:- Allows exchange of both heat and matter through the boundary. E.g. digestive system.

Esophagus
Liver
Stomach
Small intestine
Large intestine

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302 Nyongesa F. W., Ph.D 33

(b) Closed systems:- Allows only exchange of heat with surrounding but not matter.

- E.g. refrigerator

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302 Nyongesa F. W., Ph.D 34

(c) Isolated System:- No heat or matter exchange occurs with surrounding. The walls are **Adiabatic (Adiathermal)**

- E.g. Vacuum flask.

k0853935 www.fotosearch.com

SPH 302
Nyongesa F. W., Ph.D

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM

35

- **Thermodynamic Variables:-** Are parameters that describe behavior or state of system i.e., **P, T, V & composition (μ)**
- **Extensive variable:-** Dependent on mass/size of the substance present in the system e.g., internal energy U.
- **Intensive variable:-** independent on size of system

SPH 302
Nyongesa F. W., Ph.D

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM

36

- **Heat**:- Transfer of thermal energy between systems by virtue of a temp difference
- **Work**:-Transfer of mechanical energy
- Both Heat & Work = ways of transferring energy

“Bodies contain internal energy (U) and not heat”

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302 Nyongesa F. W., Ph.D 37

- **Thermodynamic equilibrium**:- State where system experiences thermal, mechanical and chemical equilibrium S.T. P, V, T & μ are const in time.

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302 Nyongesa F. W., Ph.D 38

- **Working substance**:- Fluid enclosed in the system that either receives or transfers energy to the surrounding in the form of heat or work.
- In Thermodynamics, we use the **ideal gas** as the working substance. **WHY?**

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

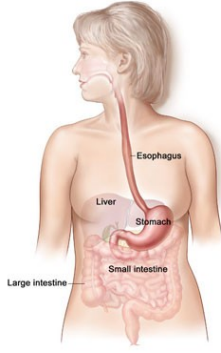

39

Activity

- Name the working substance in these systems

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

40

Lecture Evaluation

- Explain the following
 - Open & Closed system
 - Adiabatic & Diathermal Wall
 - Extensive & Intensive variables
 - Heat and work
 - Thermodynamic Equilibrium

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

41

Behavior of Ideal gases

- An ideal gas is an abstraction (i.e., theoretical gas) that obeys **Ideal gas laws** (Eqn of state).
- **Assumptions**
 - (i) It is composed of randomly moving point particles that only interact through elastic collisions.
 - (ii) The particles occupy negligible volume compared to the bulk volume of the gas

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302 Nyongesa F. W., Ph.D. 43

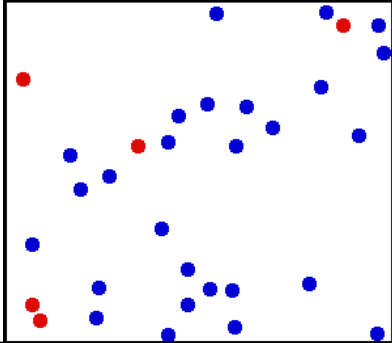

- In Thermodynamics, we use the concept of the ideal gas because:
 - It satisfactorily models behaviour of real gases under classical mechanics
 - it obeys Simple Gas Laws.
- Real gases (N_2 , O_2 , H_2 and fluids) fail to obey the ideal gas model because:
 - Gas molecules occupy finite volume and liquefy at low **T** and at high **P**
 - \exists intermolecular attractions and collisions are not elastic

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM 44

Ideal Gas Laws

- Consider an **ideal gas** enclosed in a container with movable piston
- Behavior of ideal gas depends on **T**, **P** and **V** and obey the **gas laws**:

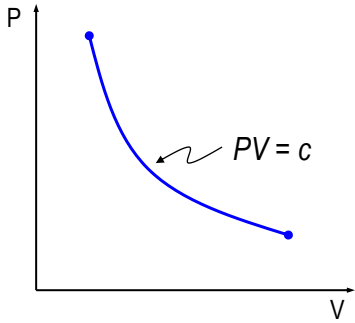

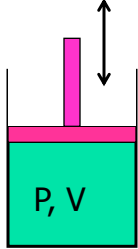

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM

(a) **Boyle's law:**

- For const T, Compressing a gas, increases P

$$P \propto \frac{1}{V}$$

$$\Rightarrow PV = C$$

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM

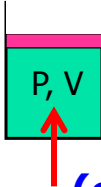

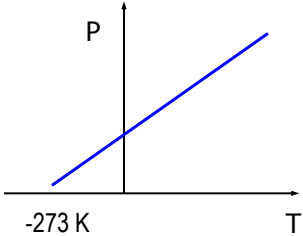

SPH 302
Nyongesa F. W., Ph.D

46

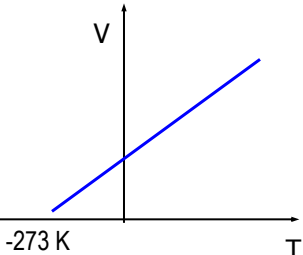

(b) Pressure law:

- For const Vol, Heating a gas increases P

$$P \propto T \Rightarrow \frac{P}{T} = C$$

(c) Charles' Law:

- For Const P, Heating a gas increases V

$$V \propto T \Rightarrow \frac{V}{T} = C$$

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

47

Cooking under constant Volume (closed sufuria)

Cooking under constant pressure (open Sufuria)

2/15/2021 10:47 AM

(d) **Avogadro's Law:** $V \propto \text{No. of moles } (n)$
of the gas i.e.

$$V \propto n$$

- Combining (a) to (d) gives

$$\mathbf{PV = nRT} \quad \text{Equation of state (1.1)}$$

- Eqn (1) defines the State of a system

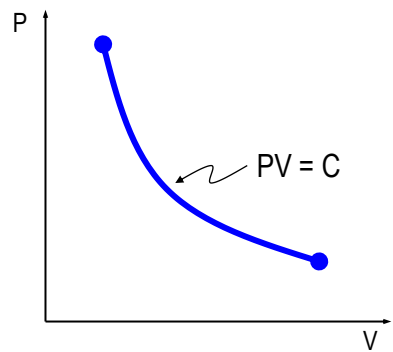

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302 Nyongesa F. W., Ph.D. 49

P-V Diagram

- From $PV = nRT \Rightarrow$ Behaviour/processes of ideal gas can be represented on **PV diagrams**

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302 Nyongesa F. W., Ph.D. 50

Real Gases

- Real gases (N₂, O₂, H₂ etc and fluids) behave like ideal gas only at **high temps and low pressures** where there is less intermolecular attractions.
- At low temps or higher pressures, real gases **condense to liquid and fail to obey the** ideal gas model.

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

51

Eqn of state of real gas is given by

$$\left(P + \frac{a}{v^2}\right)(V - nb) = nRT$$

- Where ***a*** & ***b*** ∝ molecular attractions & ***v*** = molecular volume

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

52

Activity

- Explain an ideal gas
- Why do we use ideal gas in the study of thermodynamics
- Explain conditions under which real gases approach the ideal gas behaviour

UNIVERSITY OF NAIROBI

2/15/2021 10:47 AM

SPH 302
Nyongesa F. W., Ph.D

53

Zeroth law of Thermodynamics

- Naturally, a hot object loses heat to attain thermal equilibrium with surrounding
- **Zeroth Law Gives condition for heat exchange between bodies in contact**

UNIVERSITY OF NAIROBI

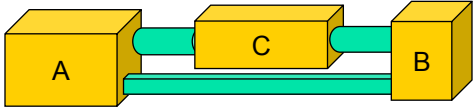

2/15/2021 10:47 AM

Nyongesa

“Statement of Zeroth Law”

"If objects A and B are separately in thermal equilibrium with third object C, then A and B are in thermal equilibrium with each other".

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM 55

Significance of Zeroth Law

- Defines condition for thermal equilibrium between bodies
- Introduces concept of temperature and how it is determined – Through thermal equilibrium

⇒ Temperature = measure of degree of hotness

UNIVERSITY OF NAIROBI 2/15/2021 10:47 AM SPH 302
Nyongesa F. W., Ph.D. 56

Thermodynamics and Laws of nature

Rule of Nature: We eat to live

Laws of Nature	Laws of Thermodynamics
1. We eat when hungry	Zeroth Law: Heat flows from hot to Cold

2/15/2021 10:47 AM

57

Lecture -Evaluation

1. State Equation of State
2. State Zeroth Law and its significance

2/15/2021 10:47 AM
